Objective

First-year engineering student looking for a software development internship for summer 2027. Alongside my studies, I run entrepreneurial projects, from market research to app development.

Education

ENSEEIHT, Toulouse INP
2026 – 2029

Master's-level engineering degree (1st year), Digital Sciences department

Classes préparatoires (PSI)
2024 – 2026

Lycée Gustave-Eiffel, Bordeaux: intensive programme preparing for engineering school entrance exams

- What I took away above all is a way of working: organising myself, setting priorities and sustaining effort over time.
- Research project (TIPE): detecting processionary caterpillar nests through image processing, coded in Python without specialised libraries and tested on about fifty photos of a model I built; it taught me to implement and test such an algorithm myself.

French Baccalaureate with honours (mention Bien)
2024

Lycée Magendie, Bordeaux

Projects

Rassasié, cooking app
Since 2026

Personal project

- An app that suggests recipes and encourages people to discover new dishes, including by scanning the food in their fridge.
- Designed and built the whole app with the help of artificial intelligence, including food recognition through the Claude API (Anthropic); the app is fully working.
- App Store release planned once the necessary funding is in place. I learned how to structure an app and integrate an external API.

Tago, smart tracker
Since 2026

Team project with two other ENSEEIHT students

- A tracker that alerts users when they are about to leave home without their keys.
- Came up with the idea; in charge of the business side and the link with the technical team.
- About fifteen user interviews conducted (around a hundred planned) to validate the need before designing the prototype.
- Solution chosen with the team: Bluetooth and ultra-wideband (UWB); main challenge: fitting the electronics into an attractive object.

Pilates grip socks made in Europe
Since 2026

Personal project, exploration stage

- Identified manufacturers in Portugal and Bulgaria; discussions with a textile entrepreneur.

Skills

Python	Good level
Ada	Good academic level

Basic knowledge: C, MATLAB, Linux, Git

Languages

French	Native
English	B2
Spanish	Basic
Italian	Basic

English oral exams in the national entrance exams: 18/20 (Mines-Télécom), 16/20 (CCINP).

Involvement

Tempo Latino festival, Gers (summers 2025 and 2026): volunteer, site setup then bar service.

Safe Place, ENSEEIHT (since 2026): prevention and support at student parties.

Genius 7, ENSEEIHT (since 2026): entrepreneurship training and project mentoring by senior students.

Interests

Running: about 30 km a week, training for a 7 km cross-country race.

Football: ENSEEIHT sports association team.

Combat sports: 8 years of judo (Paris runner-up), boxing.

Other: street workout, guitar, reading.
